

Audio Connect Dante Server

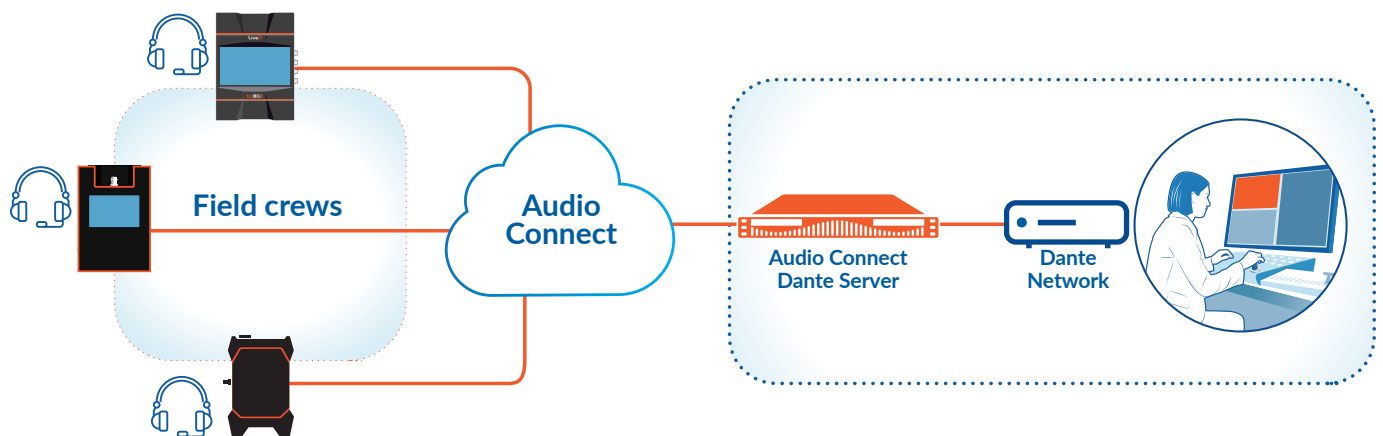

Advanced interconnectivity between your crews over IP

One of the major challenges in today's broadcasting production is communication between crews. With multiple events transmitted simultaneously, you must be able to communicate with your teams, at all times – both inside and outside the station.

If you already use Dante inside the station, wouldn't it be great to seamlessly connect it to your field crews?

LiveU's Audio Connect Dante Server does just that!

Seamlessly integrate between Dante and LiveU's Audio Connect, and have all your teams interconnected so they don't miss a beat.

Upgrade your teams' communication

- Single audio gateway for connecting to any LiveU unit in the field
- Supports up to 32 bidirectional independent audio channels
- Secured separation between the Dante network and the internet connection

Audio Connect benefits

- Low delay field-station communication
- Multiple audio options: IFB, Intercom or Party Line
- Supported by all LiveU HEVC units regardless of their transmission destination (physical server, cloud channel, LiveU Matrix)
- Intercom connection available in non-live mode
- Managed from LiveU Central

*LiveU Audio Connect license sold separately

Technical Specifications	
FORM FACTOR	1U rackmount server
SOFTWARE	Pre-installed with LiveU LRT™ Audio Connect software
AUDIO INTERFACES	Two Gigabit Ethernet RJ45 connectors
NETWORK INTERFACE	Two Gigabit Ethernet RJ45 connectors supporting Dante network redundancy
AUDIO CHANNELS	Up to 32 I/O audio channels
POWER SOURCES	110-240V 50/60HZ
CONTROL	Full control using LiveU Central cloud management platform
DIMENSIONS & WEIGHT	1U Standard server dimensions. Depth can vary by region. For more details, please contact your local sales rep.
