

Audio Connect Server

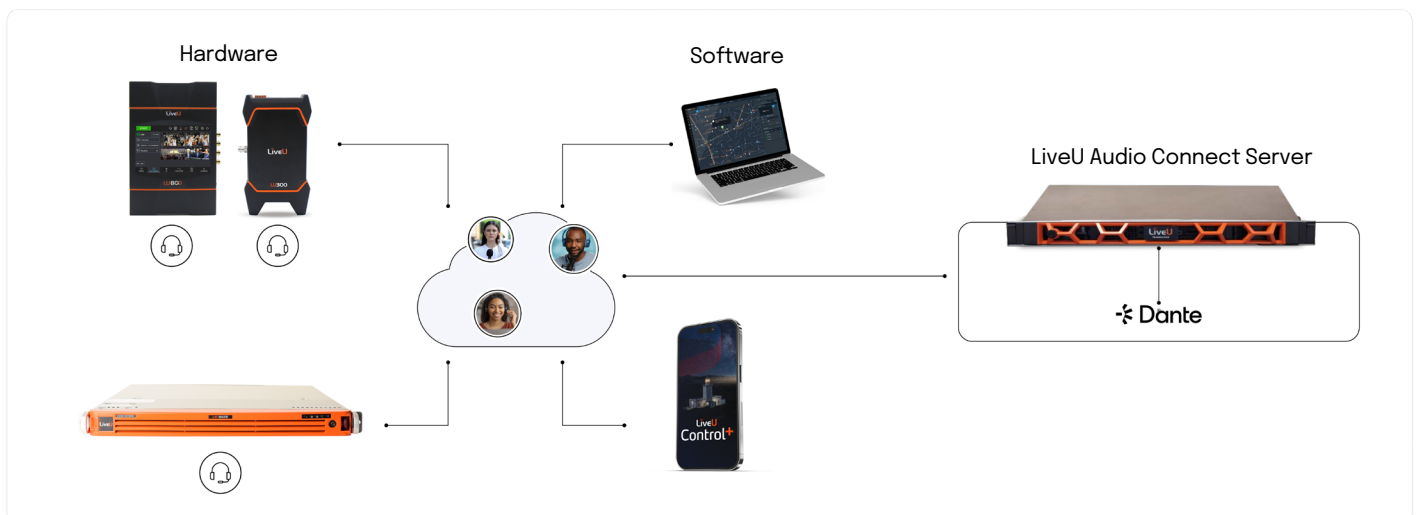

A gateway into your Dante network

Unify your workflow by connecting your field crews to your Dante network

One of the major challenges in today's broadcasting production is communication between crews. With multiple events transmitted simultaneously, you must be able to communicate with your teams, at all times - both inside and outside the station. If you already use Dante inside the station, wouldn't it be great to seamlessly connect it to your field crews?

LiveU's Audio Connect Server does just that!

Seamlessly integrate between Dante and LiveU's Audio Connect and have all your teams interconnected so they don't miss a beat.

Upgrade your teams' communication

- Single audio gateway for connecting to any LiveU unit in the field
- Supports up to 64 bidirectional independent audio channels
- Crystal-Clear Audio: experience high-quality audio communication even in challenging field conditions

Audio Connect* benefits

- Low delay field-station communication
- Multiple audio options: IFB, Intercom or Audio rooms
- Supported by all Live HEVC units regardless of their transmission destination (physical server, Cloud Channel, LiveU Matrix)
- Intercom connection available in non-live mode
- Managed from LiveU Central
- Join an Audio Room from field units, Control+ app, or your web browser

*LiveU Audio Connect license sold separately

Technical Specifications

Form Factor	1U Rackmount server
Soundcard	Digigram Dante PCIe card
Network Interfaces	Four Gigabit Ethernet RJ45 connectors supporting Dante network redundancy
Audio Channels	Up to 64 I/O audio channels
Power sources	110-240V 50/60HZ
Control	Full control using LiveU Central cloud management platform
Dimension & Weight	1U Standard server dimensions
