

LiveU

REMOTE PRODUCTION (REMI)

Deliver outstanding sports and live event productions from anywhere

Produce more events while reducing costs by delivering production from your centralized studio control room instead of on-site production and satellite trucks.

Remote productions via satellite and production vehicles cost a fortune and enlarge your carbon footprint due to the travel and energy usage involved.

Adopting an IP-based REMI solution enables you to deliver high-quality multi-camera live events while leveraging your existing technical infrastructure and equipment. With less equipment and a smaller crew required on-site, you can maximize your in-house resources and increase efficiencies across the board.

LiveU's remote production (REMI) solution provides a full studio-to-field extension for two scenarios:

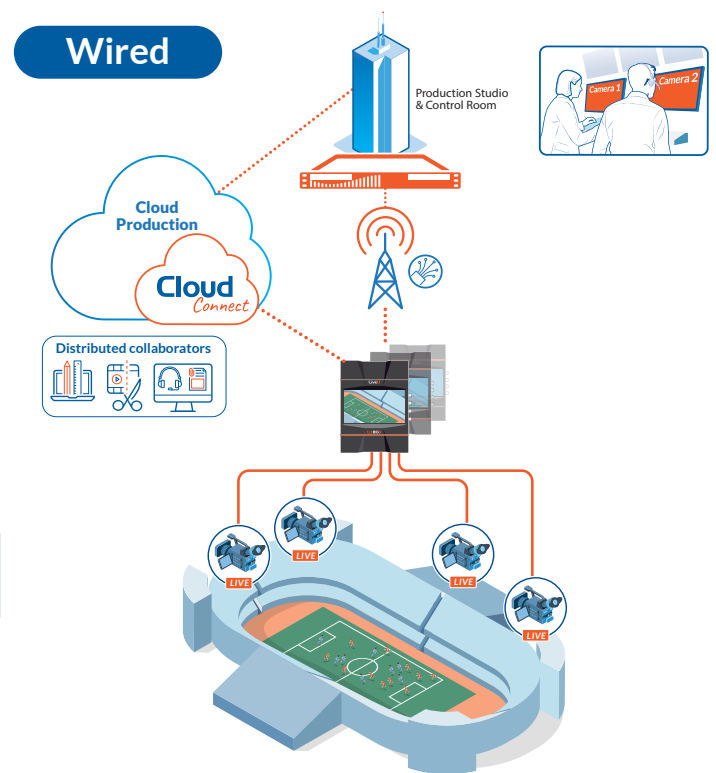

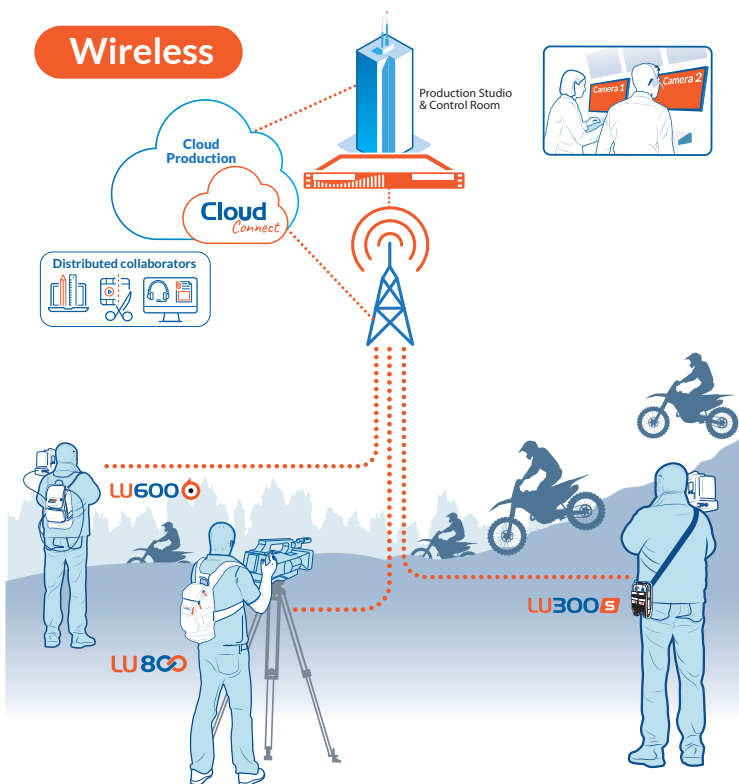

Wired - Leverage the venue's on-prem wired connections, transmitting all video feeds directly to your studio control room with LU800 multi-camera field units.

Wireless - Deploy multiple portable LiveU field units next to your camera locations, across the venue and transmit directly to your studio control room.

The LiveU REMI solution comes equipped with rich production tools to facilitate all your field crew needs while producing the event, such as Audio Connect, IP Pipe for PTZ camera control, Tally Light and more. Both the wired and wireless solutions leverage LiveU's patented bonded cellular technology and unique LiveU Reliable Transport (LRT™) protocol to provide reliable, high-quality live video transmission.

LiveU REMI production solution supports both on-prem physical and cloud workflows, delivering the LRT™ feeds either through LiveU's LU2000 server or LiveU Cloud Connect where they are reconstructed and outputted in various formats with similar latency to satellite. Feeds then flow into your existing routing, switching, graphics and replay systems for a full production, in the same way as if they were done in a production truck at the venue but at a fraction of the cost.

Benefits

Wireless IP productions are opening up new opportunities for outdoor sports like never before, replacing traditional costly satellite and fiber technologies.

Benefits

Produce events from the most advanced venues in the world. Generate additional pre-game shows with PTZ cameras. Enjoy peace of mind with Ethernet transmission as main coverage and cellular as backup.

LiveU's Remote Production benefits include:

- **Cost Savings:** Eliminating the need to deploy a field production truck (e.g. satellite) or use a venue's bandwidth, as well as reducing the number of on-site crews.
- **More Productions:** Allowing producers to cut down on the logistics and use existing equipment means they can afford to cover more events.
- **High-Quality Video:** Leveraging LiveU's proprietary bonding and LRT™ for reliable high-quality video transmission at a low cost.
- **Workflow Flexibility:** Produce your content in a physical studio or on the cloud.
- **Scalability:** The system easily scales by adding more field units and receivers (output servers).
