LiveU

VIDEO RETURN

FOR PROFESSIONALLY-PRODUCED LIVE

LiveU's Video Return service enables field crews to see what's currently on-air and receive teleprompter feeds during live sessions.

Share your return feeds easily and intuitively with anyone in your team! LiveU's Video Return lets you send your station's feeds back to the field where they can be viewed by anyone using a LiveU field unit, over any web browser or the Control+ App.

Benefits include:

Getting live feeds from the studio to the field enabling reporters to know when they are going to be on-air and freely communicate with the studio panel

Receiving teleprompting information during live sessions

Verifying the live feeds – enabling field crews to ensure their live feeds are being received correctly in real-time; can also modify their camera angle or position for the best shot (e.g. when graphics are added to the broadcast or in cases of split screens)
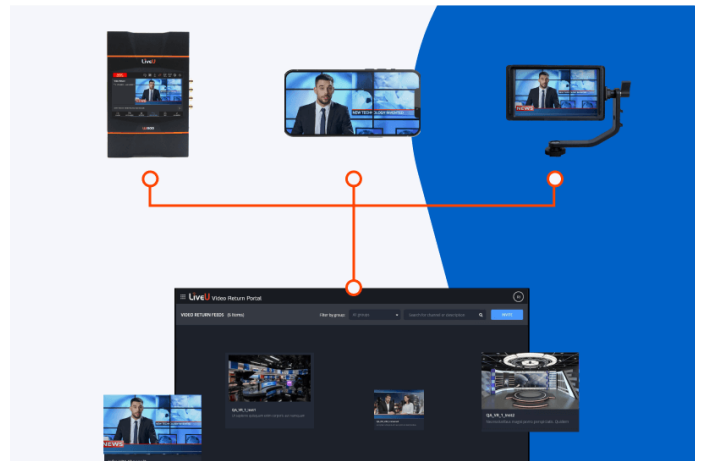

LiveU VIDEO RETURN

Offered with LiveU's portable/fixed encoders (LU600, LU610s, LU800, LU810) and mobile app, LU-Smart, Video Return enables field crews to get constant live feeds from the studio, ensuring professionally produced and smoothly run live broadcasts. The service guarantees sub-second delay from the studio to the field, with super resilient video streaming based on LiveU's LRT™ (LiveU Reliable Transport) streaming and bonding technology.

If you're working with freelancers outside your organization, including outside the LiveU EcoSystem, you can use Video Return via Link. This allows you to enhance security by sending a unique and temporary link to anyone who needs to receive the returned video feed.

Feeds can also be viewed over the Video Return Portal – available on any mobile device or PC. Offering easy access for any of the organization's employees, the Video Return portal enables maximum production flexibility.

Return feeds can be viewed by anyone in your team via the field units, using the unit's display, an external connected monitor or the LiveU Control+ app.

LiveU Video Return can be deployed in a manner to best suit your workflows, either on-prem, as a Service or in your private cloud. Supporting SRT or SDI feeds, Video Return is designed to mesh seamlessly with your existing workflows.
